

# In-line vent check valve **1300 serie**

Wager's In-Line Valves protect tanks and bulkheads from pressure or vacuum buildup during loading or unloading of tanks, and are used in locations where operations require an in-the-line vent check valve rather than a terminal vent valve.

The ball check prevents contamination of tank fluids by water during rough seas. A fine mesh flame screen protects tank gases from igniting when subject to a deck fire. The vent is available less a screen where a low pressure vertical ball check is the only requirement.

Available in cast bronze, aluminum or steel

## SPECIFICATIONS

### GALVANIZED STEEL / STAINLESS STEEL

#### CONNECTIONS

Threaded

Buttweld

Flanged

Socketweld

#### FLOAT

Stainless steel full round float

Hdpe float

#### SIZES

1.5", 2", 2.5", 3", 4", 5", 6", 8"

### ANODIZED ALUMINUM / BRONZE

#### CONNECTIONS

Threaded

Buttweld

Flanged

Socketweld

#### FLOAT

Stainless steel full round float

Hdpe float

#### SIZES

1.5", 2", 3", 4", 8"
