

Marine odor control valve

1850 serie

The 1850 is a combination odor control vent valve, with the additional feature of a ball check to prevent water from submerging the media bed during rough seas. The 1850 is cast in 356-T6 aluminum, and epoxy coated for protection from the harsh sea environment. It is available with either a 4" or 6" flanged end that mounts directly to a gooseneck pipe.

The interior of the body contains a canister filled with 12 lbs of odor scrubbing media. The media is engineered in pellet form to allow for excellent airflow thru the media bed. Our media is highly effective in removing hydrogen

sulfide gas (H_2S). Pellets are non-toxic, and landfill disposable. Every 1850 is equipped with tamper proof lockable latches, a HDPE float, and stainless screens to prevent debris from entering into the valve casting.

SPECIFICATIONS

BODY

356-t6 aluminum alloy
Power coated white or green
4" or 6" flanged end
Lockable latches

MEDIA

Transparent media conifer
12 LBS wager media lift pellets
Non-toxic, landfill disposable
Complementary lab analysis
after 12 months of use

FLOAT

HDPE float ball

SCREENS

316 stainless debris screens

CAP

316 stainless steel hardware
