

Health and Safety

FourVision's Web App for Microsoft Dynamics 365 for Talent

Register incidents

A healthy and safe workplace is the responsibility of the whole organization. By using the Health and Safety Web App, employees are now empowered to register any incident which occur. The incidents are stored in a secure online environment where you can monitor the progress.

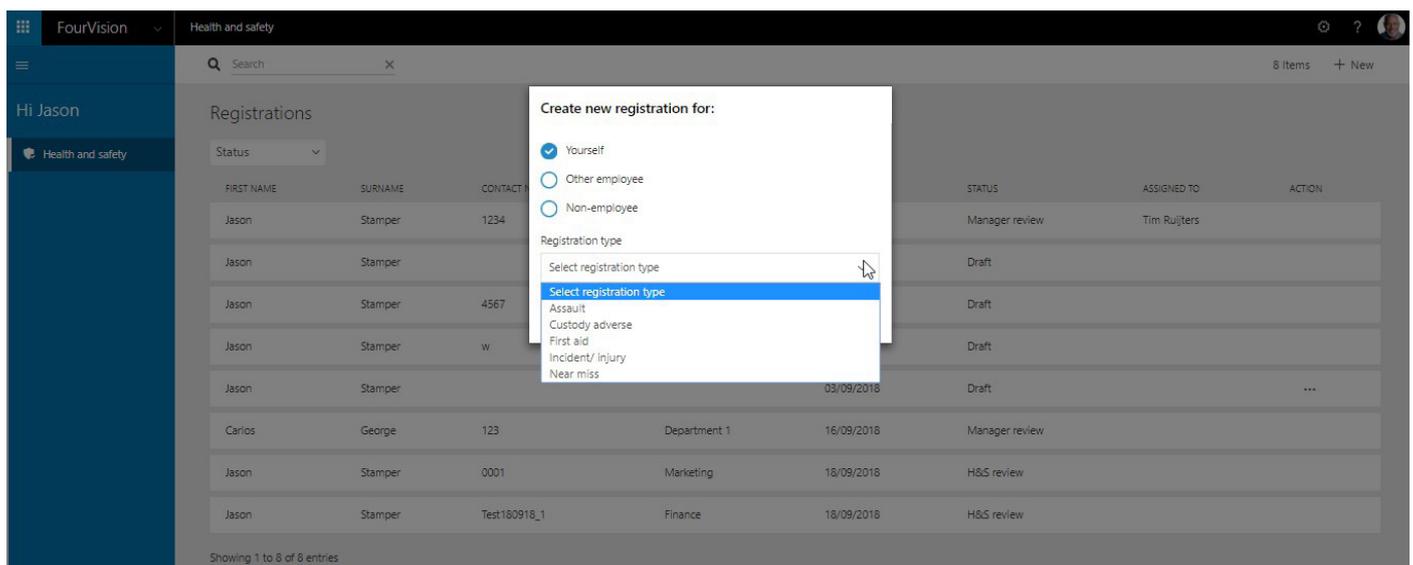

Monitor progress

Within the Web App you have the possibility to analyze reported incidents. You can also create and assign tasks to prevent incidents from happening in the future.

Development review template

You can register an incident for yourself, for another employee/colleague or a non-employee. The Web App contains a simple step-by-step workflow which guides the employee in an easy way through the process of reporting an incident. The behaviour of the steps and the fields can be easily maintained by an administrator.

The administrator is also able to configure which subjects and fields should be registered, such as: Incidents, assaults, injuries, treatments, witnesses, investigations, declarations and attachments. An employee can easily upload photos of the incident. Health and Safety is a must in every working environment. Easy to access by your mobile phone.

Health and Safety Web App

The screenshot shows a web application interface for 'Health and Safety'. The top navigation bar includes 'FourVision' and 'Health and safety > New registration'. The main content area is titled 'Registration' and 'New registration'. Below this, there are tabs for 'Person', 'Incident', 'Assault', 'Injury', 'Treatment', 'Witness', 'Investigation', 'Declaration', and 'Attachments'. The 'Incident' tab is active. The form contains several input fields: 'Incident type' (dropdown), 'Date and time of incident' (calendar), 'Location type' (dropdown), 'Operation name' (text), 'Additional information location' (text), 'Describe what happened' (text area), 'Work equipment involved' (dropdown), 'Is this incident/assault or near miss related to another reported incident' (checkbox), 'Safety equipment utilized' (dropdown), 'Ref no.' (text), and 'Occured where?' (dropdown).

Key takeaways

- Efficient method of registering incidents and accidents
- Track the entire incidents process
- Create tasks to prevent the same incident from happening again
- Fully integrated with Power BI for real-time analytics
- Dashboard to view workspace incident trends and statistics
- Incident management supported by a flexible and easily configurable workflow
- Multi-device access
- Connected to the Common Data Service
- GDPR Compliant.
