

Payroll Interface

FourVision's Web App for Microsoft Dynamics 365 for Talent

Seamless integration

Streamline your payroll process with FourVision's Payroll Interface Web App. The seamless integration between 3rd party payroll providers and Microsoft Dynamics 365 for Talent streamlines your organization's payroll process, both domestically and internationally. The Web App communicates in different ways with different payroll vendors. It supports Application Programming Interface (API) to communicate sensitive data but also file transfers such as XML and CSV.

The Web App allows the Payroll and HR department to store all payroll related data in Microsoft D365 for Talent and the Payroll Interface Web App. Based on the period, only the changes will be sent to the local payroll provider. With the Payroll Web App, FourVision combines the best of two worlds: a great global Talent solution linked with well-known payroll providers like ADP, Ceridian, Sage or other (local) payroll providers.

Payroll interface features

- Import employee data from Microsoft D365 for Talent in one click via the Payroll Web App via API to a local payroll vendor
- Add payroll and tax specific data via the Payroll Web App to the payroll provider
- Supports addition of adding payroll provider specific information
- Country or Company (legal entity) specific configuration
- Clear messages are displayed to show which records and fields are incorrect
- Clear error solutions are provided when data is incorrect

The role of the Payroll Admin

The Payroll Administrator has the ability to configure the Payroll Web App, gather the employee related data changes and export the data to the external payroll provider.

The payroll administrator can be responsible for:

- Country specific (fiscal) data
- Worker data such as worker ID, contact information and personal information
- Employment data including benefits eligibility, worked stats and worker categories
- Compensation & Payroll data including earning codes, tax codes and pay cycles.

Expedited one-time configuration

Experience a hassle-free initial configuration per requirement from your payroll provider to send to payroll.

Payroll Interface Web App

Process overview

Microsoft Dynamics 365 uses the Common Data Service model for Apps to house data and allow seamless real-time integration between all applications on the Dynamics platform. The Payroll Web App stores payroll related data as well as the changes from Microsoft Dynamics 365 for Talent. Based on smart configurations, the Web App makes the translation of Microsoft D365 for Talent data to the format and requirement of the local payroll vendor. The transfer to the external payroll provider is using API or other options like XML or CSV files for processing.

The screenshot shows the FourVision Payroll Interface Web App. The top navigation bar includes the FourVision logo and the path 'Payroll > Admin > Pay frequencies'. A search bar is present. The left sidebar shows a navigation menu with categories like 'Employees', 'Country specific', 'Country', 'Personal', 'Employment', 'Payroll Specific', 'Pay frequencies', 'Pay groups', and 'Tax'. The main content area displays a table of pay frequencies.

NAME	DESCRIPTION	STATUS	ACTION
W	Weekly	<input checked="" type="checkbox"/>	...
B	Bi-Weekly	<input checked="" type="checkbox"/>	...
M	Monthly	<input checked="" type="checkbox"/>	...
4	4 Weeks	<input checked="" type="checkbox"/>	...
SM	Semi-monthly	<input checked="" type="checkbox"/>	...
